

178.0 Release Notes

23 September 2022

Contents

Enhancements

- Localized Date Formatting
- Workplan Gantt: Lock dates based on non-editable or calculated fields
- Workplan Gantt: Ability to remove a grouping in the settings

Issue Resolutions

- Edit Form in preview pane not showing save option until scrolling past the section
- Null priority values causes history view to fail to render
- Import/export section should allow creating 100*number of updated items via create workitem business rule
- Table filters do not respond in preview pane
- Shibumi Account Locked email notification to Enterprise Admin shows invalid number of attempts

Localized Date Formatting

Summary

- Previously, all dates in Shibumi were displayed in a US format.
- International users wanted to view dates in their localized format for easy understanding and confidence that manually entered dates are in the correct format.
- Now, the format of dates displayed and entered into Shibumi is defined by each user's browser locale.

Applicable to

- Dates

Additional notes

- No set up required. By default, browser locale is determined by the computer's system settings.
- Current limitations:
 - Dates resolving from expressions need to be formatted via the formatDate() function (in notifications, custom sections, etc.)
 - Dynamic metric timeframe column headers
 - Dates in published presentations will be in US format
