# Display Multiple Associated Template Types in Tables

Summary

- Previously, App Admins could configure a Table to show the data from a <u>single</u> association.
- Admins want the ability to display content from multiple associations, like they can with descendant templates.
- Now, Tables can be configured to show <u>multiple</u> associations to provide a holistic view of content.

Applicable to

- Tables, Associations

Set up

- On a Layout in Design mode, click Add Section.
- Select Table and choose an Association. A new Table section will be visible on the Layout.
- In Configure mode, select the gear icon on the Table section and open the Table Settings modal.
- From the Row Types dropdown, select additional Associations to be included. Save.
