

# 190.0 Release Notes

22 April 2023

# Contents

## Enhancements

- Introduce an additional Board Column for Empty values
- Allow Table sections to display content in Templates

## Issue Resolutions

- Extra row shows up below total rows on refresh of Metric View
- Board section is sorting numeric attributes incorrectly
- Pick List option name with leading single quote causes creation failure
- "On Date" appears twice when selecting the Business Rule trigger dropdown a second time

# Empty Values on Board Sections

## Summary

- Previously, Board sections only showed columns for the pick list options. If a work item did not yet have a pick list value assigned, it could not be displayed in the Board section.
- In solutions where "empty" is a valid option (e.g., new opportunity ideas land in Triage with no Priority assigned; once reviewed, the PMO team assigns a Priority from a pick list), users want to see the items that have an empty value in the pick list so that they can easily assign the value using a drag & drop experience.
- Now, Board sections include an optional Empty column.

Display	Name	Label
<input checked="" type="checkbox"/>	(Empty)	Empty
<input checked="" type="checkbox"/>	1 - Idea	1 - Idea
<input checked="" type="checkbox"/>	2 - Plan	2 - Plan
<input checked="" type="checkbox"/>	3 - Execute	3 - Execute
<input checked="" type="checkbox"/>	4 - Realize	4 - Realize

## Applicable to

- Boards

## Set up

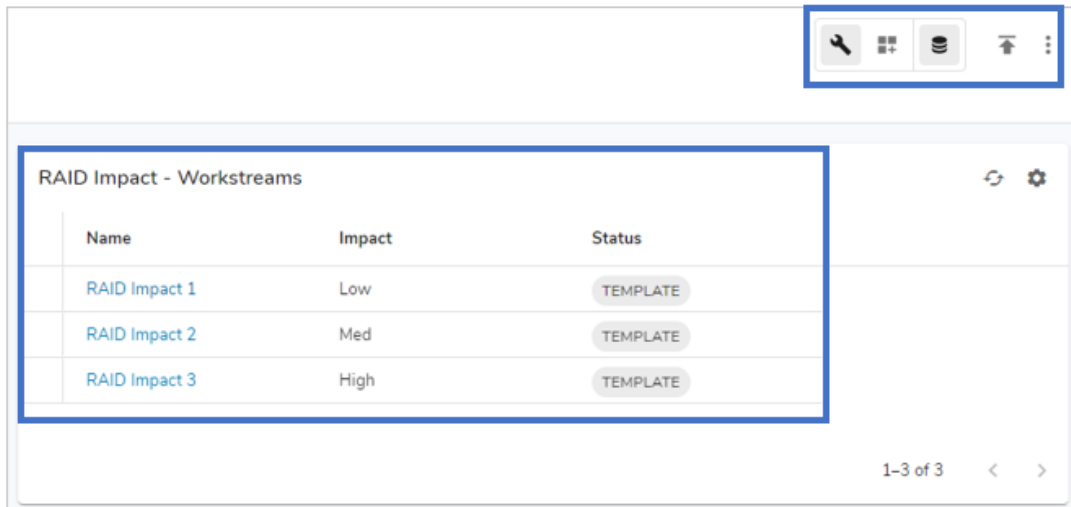

- Open the Settings dialog on a Board Section. Define a Type and Pick List via the drop-down menus.
- An (Empty) option will appear as the top value when configuring columns. It will be enabled by default.
- Optionally, disable or change the Label of the Empty column. Save.

Empty	1 - Idea	2 - Plan	3 - Execute	4 - Realize	5 - Complete

# Allow Table Sections to Display Content in Templates

## Summary

- Previously, App Admins could add items to Lists on templates to seed content that would be created on all instances of the template. E.g., a common scenario for this functionality was to populate projects with the required tasks that must always be completed to support a prescribed methodology.
- As App Admins started using the new, performant Table section, they noted that the Table section could not display content created on the template. This made it more difficult to understand and manage the seeded content.
- Now, Table sections display seeded content.

The screenshot shows a table titled "RAID Impact - Workstreams" within a template interface. The table has three columns: "Name", "Impact", and "Status". It contains three rows of data, each with a "TEMPLATE" button in the "Status" column. The table is highlighted with a blue border, and a toolbar with icons for edit, grid, list, and refresh is visible in the top right corner of the interface.

Name	Impact	Status
RAID Impact 1	Low	TEMPLATE
RAID Impact 2	Med	TEMPLATE
RAID Impact 3	High	TEMPLATE

## Applicable to

- Tables

## Set up

- No setup required. Child work items created on a template (created via a Create Form or a List) will appear in Table sections.
- Note: Association Tables will not display content on templates because Associations cannot be set on Templates.

# Resolved Issues

Release		#	Issue
190.0	*	9460	Extra row shows up below Total rows on refresh of Metric View
	*	9429	Board section is sorting by numeric attributes incorrectly
	!	9370	Pick List option name with leading single quote causes creation failure
	—	9458	"On Date" appears twice when selecting the Business Rule trigger dropdown a second time
