

# 193.1-2 & 194.0 Release Notes

17 June 2023

# Contents

## 193.1-2

### Issue Resolutions

- Performance degradation impacting page load
- Page filter updates lists / views from cache instead of recomputing

## 194.0

### Enhancements

- Allow multiple users to be assigned to the Owner and Sponsor roles
- Allow users to hold multiple roles on items
- Show multi-user role changes in history view
- Improve the Export Service for large exports
- Item Views Support Page
- Remove the space between Prefix/Suffix and the Value on a Card

### Issue Resolutions

- Reference to Modifier throws false 'invalid field' error in Assign Role BR
- Extremely long names do not but should wrap on the Move/Copy window
- Extremely long template names do not but should wrap on the Add Section window
- Extremely long names do not but should wrap on the Rename window

# Enhanced Roles

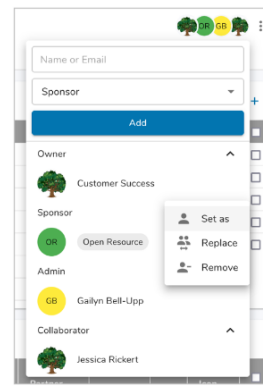

## Summary

- Previously, apart from the Owner and Sponsor roles, multiple users could be assigned to each role on a work item. For the out-of-the-box Owner and Sponsor roles, only one user could be assigned and an assignment to the Owner role was required.
- Additionally, a user could only be assigned to one role per work item.
- Often clients needed the ability to assign users to multiple roles on a single work item to accurately represent the user's involvement and responsibility for the work item.
- And the restriction of a single user assignment for Owner and Sponsor was unintuitive as it was inconsistent with all other roles.
- Now, users can hold multiple roles on a single work item, multiple users can be assigned to the Owner and Sponsor roles, and an assignment to the Owner role is not required for descendent work items.
- Additionally, all role changes are displayed on the History View.

## Applicable to

- Roles

Old Participant Window

New Participant Window

## Overview

- Since Owner is no longer required, the behavior assigning Owner to Sponsor if a new Owner was assigned has been removed. **Owner/Sponsor is no longer available on the Create dialog for Lists.** Owner is now defaulted to the creator of the item.
- The Participant Window includes the following changes:
- The Role dropdown is multi select.
- "Set As" is now "Manage". A window opens to manage all roles held by a user.
- "Replace" is now "Replace All". The user is replaced in all roles held on the item and descendant items.
- "Remove" is now "Remove All". The user is removed from all roles on the item.

For additional details refer to the Roles & User Management support site article.

# Item Views Support Page

## Summary

- Previously, Shibumi Enterprise Admins could access the System Activity report page to see active user and page view counts for each enterprise.
- Clients often requested more insight into usage of their solutions and an understanding of which pages were being accessed by which users.
- Now, the Item Views support page allows Shibumi Admins to see all page views in a solution over a 90-day period for either Work Items, Dashboards, or Presentations.

## Applicable to

- Admin Support Console (only available to Shibumi employees that are Enterprise Admins)

## Set up

- From the Admin Support Console, access the Item Views Page.
- Choose an App from the dropdown, then select the Type to display.
- Select a date range (no more than 90 days). Click Search.

For Shibumi Customer and Partner Use Only.

## Set up cont.

- The results will be grouped by Item Name and aggregated in Pivot mode by default.
- To add/remove columns, change groupings, or aggregations, open the Columns panel on the right.
- To filter by a column, hover over a column header and click on the filter menu icon or select the Filters option on the right slide-out panel.
- Right click on an Item to Export the Table in an Excel or CSV file.

# Resolved Issues

Release		#	Issue
