

203.0 Release Notes

21 October 2023

Contents

Enhancements

- Conditionally Visible Form Fields
- Conditional Formatting in Tables for data-set-enabled numeric attributes
- Download User List from the Enterprise Admin User Tab
- Set a default value for a Custom Date Range Page Filter

Issue Resolutions

- Export / Import section doesn't show detailed error messages for invalid pick list values
- Table sections column header label doesn't show in customize mode
- Operators do not filter dates in GraphQL queries

Ability to set Form Fields as Conditionally Visible

Summary

- Previously, App Admins could configure forms to organize fields for intuitive data entry and review. With Release 202, Shibumi enhanced the forms functionality by introducing the ability to define whether a field is required. These features enable App Admins to define clean and simple forms to collect and display Program data.
- The gap in the forms functionality, however, was that all fields were always displayed even when they were not needed (e.g., the Other Details field is only needed when the Other option is selected from the pick list).
- Now, App Admins can define logic to determine field visibility.

Applicable to

- Edit Forms, Create Forms

Set up

- On an Edit or Create Form, select 'Customize Layout' from the section Settings menu. Select the Settings gear on a field to open the configuration dialog.

The screenshot displays the configuration dialog for a form field. The 'Rules' tab is selected, showing a 'Visibility Rule' set to 'Conditionally Visible'. The expression for the visibility rule is: `Complexity_Rating__c.value = 1 or Complexity_Rating__c.value = 2 or Complexity_Rating__c.value = 3 or Complexity_Rating__c.value = 4 or Complexity_Rating__c.value = 5`. The dialog also shows other fields like 'Estimated Annual Benefit' and 'Complexity Rating' with their respective values and a 'Business Case Document' button. A blue arrow points to the 'Rules' tab, and another blue arrow points to the 'Visibility Rule' dropdown menu.

Set up cont.

- From the configuration dialog of the field, select the 'Rules' tab. On the 'Visible Rule' drop-down menu choose Conditionally Visible and add the Visibility Expression. Save and Publish.
- Note: Visibility rules trump Required rules. I.e., if fields are not visible they will not be required.

Conditional Formatting in Tables for Data-set-enabled Numeric Attributes

Summary

- Previously, App Admins could define conditional red-yellow-green background formatting for Metric columns in Table sections.
- App Admins have requested additional conditional formatting for numeric columns to enable them to provide greater insight into their program data.
- Now, conditional red-yellow-green background formatting can be defined for numeric attributes that have data sets enabled.

Applicable to

- Tables, Number Attributes

Set up

- Open the Attribute Details for a Number Attribute, ensure you have enabled Data Sets for the attribute.
- Navigate to the Formatting tab to enable formatting, configure the comparative dataset and threshold value.

The image shows a screenshot of a software interface with three main components:

- Table:** A table with a column titled "Cumulative Net Benefit - Actual". The values in this column are: 1,100,000 (green), 1,820,000 (green), 767,000 (orange), 780,000 (orange), 10,176,400 (green), 645,400 (red), 960,000 (orange), 517,000 (red), 2,583,000 (green), 1,835,000 (green), 3,636,000 (green), 5,894,000 (orange), 1,080,000 (orange), and 904,000 (orange).
- Edit Column Dialog:** A dialog box titled "Edit Column" for the column "Cumulative Net Benefit - Actual". It shows settings for the column header label, width, and a checked option for "Display conditional formatting".
- Attribute Details Dialog:** A dialog box titled "Attribute Details: Cumulative Net Benefit" with a "Formatting" tab. It shows the "Enable" checkbox checked, a "Comparative Data Set" dropdown set to "Target (target_d)", and three conditional formatting rules:
 - Green: when Actual Value is \geq Target Value
 - Orange: when Actual Value is $<$ Target and within 25% of Target Value
 - Red: when Actual Value is more than 25% below Target Value

Set up cont.

- On a Table section, click the Settings gear to Customize. Select a dataset-enabled numeric column and choose Configure.
- In the Edit Column dialog, enable the Display Conditional Formatting option. Save.

Download User List from the Enterprise Admin User Tab

Summary

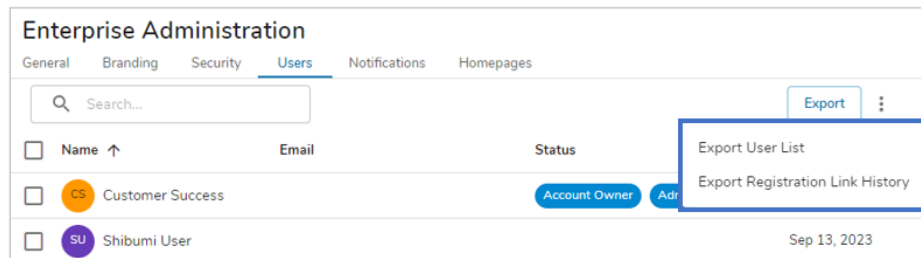

- Previously, Enterprise Admins could review and manage user accounts from the Enterprise Admin User tab.
- Clients have requested the ability to export the list of users to, for example, allow easy comparison against other systems (e.g., Active Directory).
- Now, Enterprise Admins can export the list of users from the Enterprise Admin User tab.

Applicable to

- Enterprise Administration

Set up

- As an Enterprise Admin, select the 'Enterprise Administration' option from the navigation sidebar.
- Select the Users tab.
- From the Export drop-down menu, select the 'Export User List' option. Additionally, you can right click on the user list and select the Export option. The file will download.

Notes

- Bonus enhancement! The user list table header is now pinned! The headers and the action options will remain visible while scrolling through the user list.

Default Value for the Custom Date Range Page Filter

Summary

- Previously, the default values that could be defined in a Date Range filter had to be selected from the Preset options.
- To better align to program timelines, App Admins requested the ability to set a custom date range as the default value for the filter.
- Now, App Admins can set a custom default range on the Date Range page filter that will be displayed on page load.

Applicable to

- Date Range Page Filter

Set up

- On a Layout, add a Date Range filter from the drop-down menu.
- Define a name for the Date Range filter and select 'Next'.
- Check the 'Allow Custom Date Range' checkbox, then open the Default Option drop-down.

Add Date Range Filter

Definition

Add Options

Date Range Preset *	Name *
This Month	This Month
Date Range Preset *	Name *
Last Month	Last Month
Date Range Preset *	Name *
This Year	This Year
Date Range Preset *	Name *
Last Year	Last Year

+ Add Option

Allow Custom Date Range

Default Option
Custom

Default Start Date *
Program_Start_t_c

Default End Date *
Program_End_t_c

Previous Save

Set up cont.

- Select the 'Custom' option from the drop-down menu. Two new fields will appear below: Default Start Date and Default End Date.
- Define values for each using the Shibumi Expression Language. Save.

Resolved Issues

Release		#	Issue
203.0	!	9933	Export / Import section doesn't show detailed error messages for invalid pick list values
	!	9912	Table sections column header label doesn't show in customize mode
	!	9747	Operators do not filter dates in GraphQL queries
